(57) Abstract :

A systematic survey using machine learning techniques to analyse the efficacy of just-in-time software defect prediction systems is the proposed invention. The proposed invention focuses on surveying the software defect prediction systems systematically. The invention focuses on analyzing the efficacy of just-in-time software defect predictions systems using algorithms of machine learning.

(57) Abstract :

The present invention discloses a Smart Power Distribution System (SPDS) equipped with predictive maintenance and fault detection capabilities leveraging machine learning techniques. Traditional power distribution systems often face challenges related to unforeseen equipment failures, leading to downtime, safety hazards, and operational inefficiencies. The proposed SPDS addresses these challenges by integrating advanced machine learning algorithms to analyze real-time data from the power distribution network, predict potential equipment failures, and proactively schedule maintenance activities. Additionally, the SPDS employs fault detection algorithms to rapidly identify and localize faults, minimizing downtime and enhancing system reliability. This innovative system has the potential to revolutionize power distribution infrastructure, ensuring uninterrupted power supply, reducing maintenance costs, and improving overall system performance.
